EDUCATION

The University of Texas at Dallas

Master of Science, Information Technology and Management

Dallas, United States

August 2025 – May 2027

Pune University

Bachelor's in Computer Engineering

Pune, India

August 2018 – May 2022

TECHNICAL SKILLS

Languages: Python, Java, C/C++, C#, JavaScript

Frameworks & Web: ASP.NET Core MVC, React, Node.js, Express, Flask, gRPC, Entity Framework, HTML, CSS, REST APIs, WebSockets

Databases & Big Data: MySQL, MongoDB, Neo4j, ChromaDB, Apache Spark, Hadoop, Kafka, MapReduce

Data Analytics: Pandas, NumPy, Matplotlib, Power BI, Tableau, Advanced Excel

Cloud & DevOps: Microsoft Azure, AWS, Docker, Azure DevOps, CI/CD, Git, JWT Auth, Postman

EXPERIENCE

Software Engineer Intern

Federal Reserve Bank of Dallas

June 2026 – Present

Dallas, United States

- Built a Python pipeline using regex-based section detection and the SEC EDGAR API to extract "Item 3. Legal Proceedings" text from 10-K, 10-Q, and 8-K filings across 10000 companies, converting it via a locally hosted LLM (Ollama) into structured fields forming a panel dataset reducing manual review time upto 75%.
- Implemented data quality safeguards including quote-grounding verification, cross-filing status consistency checks, fuzzy case deduplication via token-overlap grouping and a confidence score per case.

Software Engineer

Capgemini Engineering

October 2022 – December 2024

Pune, India

- Developed an internal automation tool using C++, Python, Shell scripting, Windows API and ODBC to streamline MRI SDK installation from SVN repositories, eliminating manual errors and reducing deployment time by 80%.
- Built a tablet-based MRI application, developing gRPC APIs for real-time communication between tablets and MRI systems, streamlining scan setup and cutting patient waiting time by 50%.
- Analyzed MRI scan operational data using Power BI, Tableau, R, and Advanced Excel to identify performance trends and utilization patterns, enabling data-driven clinical and operational decision-making.

Software Engineer Intern

Capgemini Technologies

February 2022 – May 2022

Pune, India

- Developed a cloud-native ASP.NET Core MVC web application to enhance scalability of system workflows.
- Deployed the application to Azure App Services and implemented Azure DevOps CI/CD pipelines, enabling automated, repeatable, and faster releases.
- Managed application data using Azure SQL Database and Azure Blob Storage, and monitored system health with Azure Monitor and Application Insights to maintain high availability and quickly surface performance issues.

PROJECTS

ClubHub | (Node.js, Express, SQLite, WebSockets, JWT)

- Built a full-stack club discovery and application platform using Node.js, Express, and SQLite, with JWT-based authentication and per-club role-based access control enforced server-side on every admin route.
- Designed a real-time notification system using WebSocket fan-out keyed by user ID, with a durable database-backed fallback so offline users still receive notifications on next login.
- Implemented full-text club search with SQLite FTS5, synced to the primary table via triggers, and a tag-based recommendation feature matching student interests to club tags.

MedGraphAI | (Neo4j, ChromaDB, SentenceTransformers, Streamlit, Python)

- Built a symptom-based disease and treatment assistant combining a Neo4j graph database for structured medical relationships with ChromaDB vector search and SentenceTransformers embeddings for semantic symptom matching.
- Designed an offline/online pipeline architecture, precomputing embeddings and graph relationships offline, then serving real-time symptom-to-disease matching through a Streamlit interface.
